

GARAGE MANAGEMENT SYSTEM

Date	20/6/2025
Team Id	LTVIP2025TMID29678
Project Name	GARAGE MANAGEMENT SYATEM
Maximum Marks	

Chapter 1:- Introduction:

Garage management refers to the organized administration of automotive repair and maintenance services within a garage or workshop. It ensures that operations run smoothly, vehicles are serviced efficiently, and customer satisfaction is maintained. Whether you're handling a small local repair shop or a multi-bay automotive service center, a well-structured garage management system is crucial.

1.1Project Overview:

The Garage Management System (GMS) is a comprehensive digital solution designed to streamline operations in automotive service centers. It automates and organizes key garage functions such as vehicle servicing, inventory tracking, billing, customer management, and appointment scheduling.

This system replaces manual processes with a centralized platform that improves efficiency, reduces errors, and enhances customer satisfaction. Built using technologies like PHP, MySQL, or Salesforce, the system can be tailored to suit small garages or large service chains.

1.2 Purpose of the Project:

The purpose of the Garage Management System is to digitize and streamline the operations of automotive service centers, replacing manual processes with an efficient, user-friendly platform. This system is designed to enhance service delivery, improve customer satisfaction, and optimize resource management within garages.

By automating key functions such as vehicle service tracking, inventory control, billing, and appointment scheduling, the project aims to:

- Increase Operational Efficiency by reducing paperwork and manual errors.
- Improve Customer Experience through timely updates, transparent billing, and service history access.
- Enable Data-Driven Decisions with dashboards and reports that highlight performance metrics.
- Ensure Inventory Accuracy by tracking spare parts usage and stock levels.
- Support Scalability for garages of all sizes, from local workshops to multi-location service chains.

Ultimately, this project empowers garage owners and staff to deliver faster, smarter, and more reliable automotive services while building stronger relationships with their customers.
