

GARAGE MANAGEMENT SYSTEM

Date	20/6/2025
Team Id	LTVIP2025TMID29678
Project Name	GARAGE MANAGEMENT SYATEM
Maximum Marks	

Chapter 5 : Project Planning & Scheduling

5.1 - Project Planning :

Weeks	Milestone Completed
Week - 1	Objects ,Tabs
Week - 2	The Lightning App, Fields ,Validation Rules
Week -3	Duplicate rule , Proflies
Week-4	Role & Role Hlerararchy
Week -5	Users , Public Groups
Week -6	Apex Trigger , Dashboards

GARAGE MANAGEMENT SYSTEM

Chapter 7 : Functional and Performance Testing

7.1 - Performance Testing (Trigger Testing) :

Performance Testing is a non-functional testing method used to evaluate how a system behaves under various workloads. It measures responsiveness, stability, scalability, and resource usage. **Trigger Testing**, in this context, refers to testing how specific events (like database triggers, cloud function invocations, or Apex triggers in Salesforce) perform under load or stress.

❓ What Is Performance Testing?

According to GeeksforGeeks and LambdaTest, performance testing ensures that:

- The system can handle expected user loads
- Bottlenecks are identified and resolved
- The application remains stable and responsive under stress

❓ What Is Trigger Testing?

Trigger Testing focuses on evaluating the performance of event-driven components such as:

- **Database triggers**
- **Salesforce Apex triggers**
- **Cloud function triggers** (e.g., AWS Lambda, Azure Functions)

Aspect	Functional Testing	Performance Testing
Goal	Verify correctness of features	Measure speed, scalability, and stability
Focus	What the system does	How well the system performs
Test Criteria	Pass/fail based on expected output	Response time, throughput, resource usage
Tools	Selenium, JUnit, TestNG	JMeter, LoadRunner, Gatling
