Chapter 7: Funtional and Performance Testing

7.1 - Performance Testing (Trigger Testing) :

□ Performance Testing (Trigger Testing) in Salesforce for a Garage Management System involves evaluating how well your custom Salesforce implementation handles event-driven actions—like vehicle check-ins, service updates, and billing workflows—under various load conditions.

- Apex Triggers for calculating service costs or updating inventory
- Flows for sending emails or updating payment status
- Reports/Dashboards for service ratings and billing summaries

Salesforce-Specific Considerations

- Never test in production—use a Full Copy Sandbox instead
- Governor Limits apply (e.g., Apex CPU time, SOQL queries, DML operations)
- Coordinate with Salesforce Support if your tests generate high.

Tools for Salesforce Performance Testing

Tool	Use Case
Developer Console	Profile Apex triggers and flows for CPU/memory usage
Event Monitoring	Track backend metrics like DB time, API usage, and user sessions
TestGrid / BlazeMeter	Simulate user behavior and load on Salesforce apps
